PAY FOR ORDER

-

Workflow

- Cart
- Checkout --> Pay for Order (Order in Status Pending Payment)
- SecPaid Payment Page
- Success:
  - Success - Callback auf Order Overview
  - Order im Statuns: On-hold
  - Webhook auf Payment Endpoint
  - Order im Status: Processing
- Cancel
  - Cancel-Callback --> Order auf failed, Cart wird neugefüllt, neue Order und wieder Checkout-Page im Shop
  - Webhook-Cancel--> Order auf failed

Bei z.B. Banküberweisung:
Success-Callback änder Order von Pending Payment auf On-Hold
Nach erfolgreicehr Überweisung wird 5 Tage später Webhook geschickt --> Order auf processing

Woocoommerce Order:

STATUS	DESCRIPTION	NOTES
Pending payment	The order has been received, but no payment has been made. Pending payment orders are generally awaiting customer action.	If your customer needs a payment link to make payment, check the document on paying for orders.
On hold	The order is awaiting payment confirmation. Stock is reduced, but you need to confirm payment.	The **On hold** status is generally assigned to an order when a customer pays via an "offline" payment method that doesn't have immediate payment confirmation, like the BACS gateway. Offline payment methods require you to manually verify the payment was processed; once you confirm payment has been received, you can change the status of the order. The **On hold** status may be temporarily assigned to orders if the customer paid using a delayed notification payment method, like SEPA Direct Debit. Depending on the payment gateway in use on your site, the order may be moved automatically from **On hold** to a different status once the payment clears. Check the order notes on the order and the documentation of your payment gateway for details. You may also see the **On hold** status if you use a payment gateway that has an option to separate the authorization and capture of funds. Check the order's notes and your payment gateway's documentation for details.
Processing	Payment has been received (paid), and the stock has been reduced. The order is awaiting fulfillment.	All orders require processing except those in which all products are both Virtual and Downloadable. This is the shop owner or warehouse's cue to ship the order and manually change the status to **Completed**.
Completed	Order fulfilled and complete.	Requires no further action.
Failed	The customer's payment failed or was declined, and no payment has been successfully made	Depending on the payment gateway and the payment confirmation method it uses, this status may not show immediately. Orders will be marked **Failed** if the order was abandoned before payment was complete and the hold stock window expires without a response. Here is a helpful article for a better understanding and how to fix **Failed** orders in WooCommerce.
